

06/17 Follow-up

Hi all!

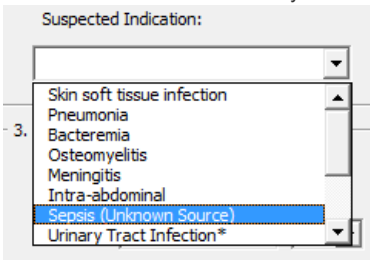

Here is a follow-up from today's meeting. Random, but I'm embarrassed by some of the praise received at the meeting. =)

Any questions or features, feel free to reach out to my email at kpressa@gmail.com.

Regards and thanks!
Kurt

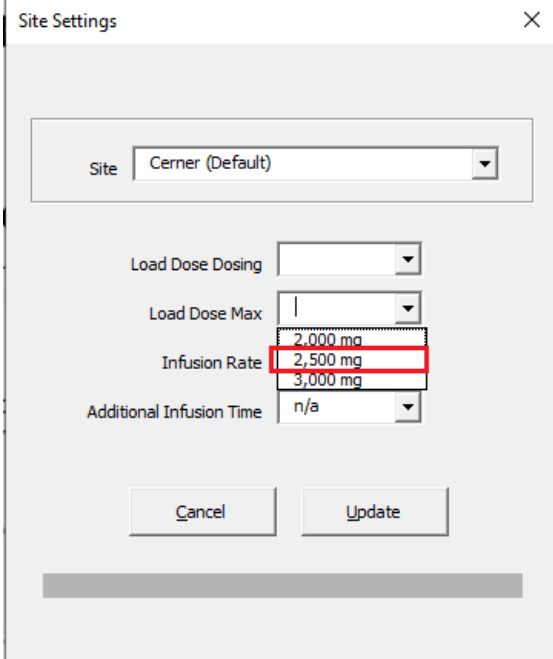

Updates

- 1. Add **Sepsis (Unknown Source)** to indications list
 - Pharmacist is able to free-write any indication into this field, but indications already listed will autocomplete when typing.

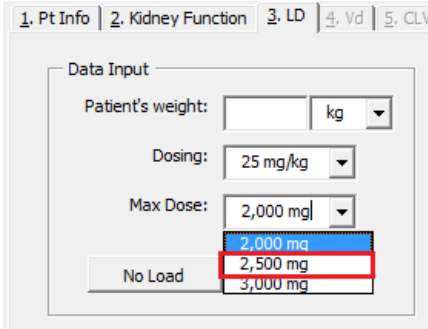

- 2. Add **"2,500 mg"** to maxdose list

- Added to Site Settings

- Added to New Consult

- 3. Check to see if **BMI >= 30** is indeed indicator for choosing Crass
 - 30 is the cutoff used to select Crass instead of Matzke when selecting a vancomycin clearance population estimation equation.
- If NewConsult.MultiPage.value = pg5_CLVanco And Not pt.char.BMI < 30 Then NewConsult.cmbCLVanco = "Crass"

4. Date/Time Picker on same monitor

- Updated Date/Time Picker to load on same monitor as calculator

`Private Sub UserForm_Initialize()`

```
Me.StartupPosition = 0
Me.Left = Application.Left + (0.5 * Application.Width) - (0.5 * Me.Width)
Me.Top = Application.Top + (0.5 * Application.Height) - (0.5 * Me.Height) + 120
```

```
tbConfirmationDate.ForeColor = vbBlack
```

`End Sub`

Working on for next week

1. Adding current AUC to Post-Levels on Page 3. Vd
2. Adding Transfer to DMC to New Consult userform
